Subject Index of Volume 20

Automatic generation control
in interconnected power system, self-tuning algorithm for, 157

Bad-data suppression
iterative, applied to state estimators based on augmented matrix method, 205
Breakdown electric field strength
of XLPE cables under divergent fields, influence of temperature and water on, 89
Bridges
series-connected HVDC, differential firing-angle control of, 113

Cables
XLPE, under divergent fields, influence of temperature and water on breakdown electric field strength of, 89
Circuit breakers
residual current, or ground fault protectors of power sources connected to computer and electronic loads, nuisance trippings of, 23
Computer relaying
and expert systems: new tools for detecting high impedance faults, 31
Computers
vector, efficient factorization and solution algorithms on, 121
Contingency selection
decoupled, improved algorithm, 215

Decoupled contingency selection
improved algorithm, 215
Digital differential relaying
microprocessor based, for generator protection: real time test results, 237
Distribution system losses
modified technique for minimization of, 81

Economic dispatch
hierarchical, for multi-area power systems, 193
Emergency generating facilities
evaluating the reliability performance of industrial power systems with, 143
Estimator design
and time-varying state feedback, 167
Expert system(s)
and computer relaying: new tools for detecting high impedance faults, 31
short-term unit commitment, 1

Faults
high impedance, new tools for detecting: computer relaying and expert systems, 31
Firing-angle control
differential, of series-connected HVDC bridges, 113

Generation control
automatic, in interconnected power system, self-tuning algorithm for, 157
Generator protection
microprocessor based digital differential relaying for: real time test results, 237
Ground fault protectors
or residual current circuit breakers of power sources connected to computer and electronic loads, nuisance trippings of, 23

Induction generator
self-excited, with AC–DC conversion scheme for small-scale generation, steady-state analysis of, 95
Inductors
neutralizing, for noise mitigation on distribution systems, selection of, 105

Load flow methods
in polar and rectangular coordinates, studies of, 225
Loadability
optimum compensation to improve, 73
Losses
distribution system, modified technique for minimization of, 81

Multi-area power systems
hierarchical economic dispatch for, 193
Multiphase line transients
modelling and analysis of, 49

Optimal VAR planning
involving both preventive and corrective modes: experience on Taiwan power system, 39
Optimum compensation
to improve line loadability, 73

Reliability evaluation
bulk power system, analytical technique for, 63
Reliability performance
of industrial power systems with stand-by and emergency generating facilities, evaluating, 143

Security enhancement
extended algorithm for power systems, 137
Self-excited induction generator
with AC–DC conversion scheme for small-scale generation, steady-state analysis of, 95
Self-tuning algorithm
for automatic generation control in interconnected power system, 157
Stand-by generating facilities
evaluating the reliability performance of industrial power systems with, 143
State feedback
time-varying, and estimator design, 167

Elsevier Sequoia/Printed in The Netherlands

Synchronous machine parameters
estimation of, from performance relations, 173

Transformers
distribution, in presence of harmonics and distortion, evaluation of temperature rise of, 15
Transient stability
direct analysis of: experience with Taipower system, 181
Transients
multiphase (twelve-phase) line, modelling and analysis of, 49

Trippings
nuisance, of residual current circuit breakers or ground fault protectors of power sources connected to computer and electronic loads, 23

VAR planning
optimal, involving both preventive and corrective modes: experience on Taiwan power system, 39
Vector computers
efficient factorization and solution algorithms on, 121
